

Course 3 — Build with AI

Websites, Products & the Full Stack — No Coding Required, Real Projects Delivered

Who This Course Is For

- You're a freelancer, entrepreneur, or small business owner who needs a website
 - You've seen 'built a website in 60 seconds' reels and want to understand how — properly
 - You want to know which AI tool to use and why, not just follow a single tutorial
 - You need to go live with a real site — portfolio, landing page or e-commerce
 - You want to handle domain, hosting and integrations without hiring a developer
-

What This Course Is — And What It Isn't

"Seeing someone drive a car and knowing how to drive one are not the same thing. But once you understand how the controls work and which road to take — getting there is completely within your reach."

This course will not make you a web developer. What it will do is make you genuinely capable of building, launching and maintaining professional websites using AI tools — completely without code.

Most tutorials teach you one tool. This course starts by teaching you the entire landscape — Framer, Lovable, Webflow AI, Bolt, v0, Wix AI and more — and gives you a clear framework for deciding which one fits your project, your skill level and your budget.

You will build three real websites during this course. Not demos. Not mockups. Real projects you can put in front of clients, employers or customers from day one.

What You'll Be Able to Do After This Course

- Compare and choose between AI website builders using a clear decision framework
- Build a professional portfolio site from zero to live in under an hour
- Create a high-converting landing page with AI-written copy and a working lead form

- Set up a simple e-commerce or service site with payment and booking integrations
 - Connect your site to analytics, email tools, chatbots and automation systems
 - Buy a domain, set up hosting, and launch your site the right way
-

Selling Points (for landing page / marketing)

- Every major AI website builder compared — so you choose the right one, not just the popular one
 - Build 3 real websites during the course — portfolio, landing page, and e-commerce
 - Integrations masterclass — analytics, email capture, chatbots, Zapier and more
 - Domain and hosting explained simply — buy, connect and go live with confidence
 - Copy-paste AI prompts for every build — design brief, copy, SEO and more
 - No coding. No designers. No agencies. Just you, the right tools, and this course.
-

Course Modules

Module 1 — The AI Builder Landscape: Which Tool, When

"Understanding the options before you touch anything — this changes everything"

- **Lesson 1.1** — The full landscape: Framer, Lovable, Webflow AI, Bolt, v0, Wix AI, Hostinger AI — what each does
- **Lesson 1.2** — The flexibility vs. speed decision matrix — how to pick your tool for every project type
- **Lesson 1.3** — When to use a prompt-first builder: Lovable and Bolt for rapid, functional builds
- **Lesson 1.4** — When to use a visual AI builder: Framer and Webflow for design-led, custom projects
- **Lesson 1.5** — When to just use Wix or Hostinger AI — the simplest path for simple needs
- **Lesson 1.6** — Free vs. paid — an honest breakdown of what you get and what you actually need

Module 2 — Build #1: Your Portfolio Site (Zero to Live in 1 Hour)

"Your first real build — professional, personal, and live on the internet"

- **Lesson 2.1** — Planning your portfolio with AI — content, structure, sections and tone
- **Lesson 2.2** — Live build in Framer: generating your site with AI prompts from scratch
- **Lesson 2.3** — Writing your About, Work and Contact sections with Claude — copy that connects
- **Lesson 2.4** — Mobile responsiveness — exactly what to check before you call it done
- **Lesson 2.5** — Connecting a custom domain to your Framer site — step by step, no guessing

Module 3 — Build #2: A High-Converting Landing Page

"Not just a page — a page that makes people take action"

- **Lesson 3.1** — The anatomy of a landing page that converts — what every section must do
- **Lesson 3.2** — Write your headline, subheadline and CTA with AI — conversion-focused, not generic
- **Lesson 3.3** — Live build in Lovable or Webflow — generating the full page from a single prompt
- **Lesson 3.4** — Add a working lead capture form and connect it to your email tool
- **Lesson 3.5** — SEO basics with AI — page title, meta description, image alt text done right

Module 4 — Build #3: A Simple E-Commerce or Service Site

"Turn your idea, skill or product into something people can actually buy"

- **Lesson 4.1** — Setting up a site that sells products or services — the right structure from the start
- **Lesson 4.2** — Adding Stripe payments — connect and go live with payments in under 10 minutes
- **Lesson 4.3** — Writing product or service descriptions at scale using AI — fast, consistent, on-brand
- **Lesson 4.4** — WhatsApp and Instagram inquiry integrations — make it easy to contact you
- **Lesson 4.5** — Add a simple booking system with Calendly — embedded, professional, done

Module 5 — Integrations Masterclass

"Your site does more when it's connected — here's how to connect everything"

- **Lesson 5.1** — Connect your site to Google Analytics — and actually understand what you're reading

- **Lesson 5.2** — Email list capture — connect to Mailchimp, Brevo or ConvertKit in minutes
- **Lesson 5.3** — Add an AI chatbot to your site — zero code, live in under 20 minutes
- **Lesson 5.4** — Embed your Instagram feed and social links — keep your site and socials in sync
- **Lesson 5.5** — Zapier automation — auto-respond to form submissions and new leads instantly
- **Lesson 5.6** — Notion as a CMS — publish and update your blog without touching your site editor

Module 6 — Domain, Hosting & Going Live the Right Way

"The last mile — done right, your site is live, fast, secure and yours"

- **Lesson 6.1** — Domain names — how to pick a good one, and where to buy it (Namecheap, GoDaddy, Hostinger)
- **Lesson 6.2** — Hosting explained simply — what you actually need vs. what you're being sold
- **Lesson 6.3** — SSL certificates — what they are, why they matter, and how to get one free
- **Lesson 6.4** — Page speed basics — why it matters and what to fix using free tools
- **Lesson 6.5** — Maintaining and updating your site with AI going forward — stay fresh without the stress

Course Stats (Estimated)

Total Modules	6
Total Lessons	~31
Suggested Format	Short video lessons (8–15 min each)
Estimated Duration	5–7 hours total
Level	Beginner to Intermediate — no coding required
Outcome	3 real websites built and live, with integrations, domain and hosting handled
